

HAIL REPAIR PRE & POST REPAIR SCANNING

Most vehicles today have Advanced Driver Assistance Systems or ADAS. These systems are responsible for all critical safety features on your vehicle. These systems have sensors throughout the entire vehicles panels, doors, hoods, hatches, roofs and more.

PDR Technicians take tools that enter the panels of your vehicle and can damage, alter or cancel the operation of these critical safety sensors including air bag deployment. Other technicians while doing other repairs associated with a hail repair can also damage these sensors.

It is critical, that you ensure your vehicle has a Pre-Hail Repair scan before any work is done, to make sure all damage caused by the hail event are identified and that your insurance claim properly accounts for any damage to these critical systems.

After hail and dent repairs are completed you need to ensure that the repair organization, shop or technician completes a Post-Hail Repair scan of your vehicle and provides you with a printed physical report that verifies that your vehicle and all of its safety features are working correctly.

**DON'T LET JUST ANY SHOP or PDR TECHNICIAN REPAIR YOUR VEHICLE
THE SAFETY OF YOU AND YOUR FAMILY MAY BE PUT AT RISK!**
